

ENVIRONMENTAL POLICY

Organization LUKOV Plast spol. s r.o., a manufacturer of injection-molded and assembled plastic parts and subassemblies, feels a responsibility to protect the environment of which we are an integral part as its moral obligation.

In enforcing our corporate policy throughout the life of the product, we ensure that all activities in the development, supply, manufacturing and sale of our products, as well as in the handling and disposal of used materials and substances, are protecting environment as a natural basis for life and the considerate and rational use of natural resources was chosen.

Environmental policy is accepted as a long-term goal and commitment of the organization to all stakeholders. We want to address our relationship with the environment systematically, which is why we apply the requirements of the international standard ČSN EN ISO 14001 to all plant activities.

OUR COMMITMENTS:

To meet the requirements of legal regulations and other requirements adopted in the field of the environment.

Prioritize environmentally friendly technologies and act in this sense on suppliers, subcontractors, as well as give preference to those who choose the same policy and requirements of environmental protection as our organization.

For newly acquired buildings and equipment, take into account low energy consumption and the lowest possible impact on the environment; promote biodiversity of plant and animal species where possible through our activities.

We will continue to use materials with the maximum possibility of recycling with the knowledge of the lowest possible burden on the environment.

Consider prevention to be the most effective way to avoid of accidents, near-misses and situations, the consequences of which could have a negative impact on the health of employees.

Continuously look for ways to reduce energy, water, raw materials and other materials consumption, as well as reduce the carbon footprint; while seeking further ways to improve the EMS.

Evaluate the environmental impacts (risk of air, water resources and soil pollution from chemicals handling) of technological changes and planned new productions and products as part of the production preparation before the decision on to implement them.

To raise the awareness of our employees about the effective protection of the environment through education, communication of environmental aspects of their work to carry it out responsibly

Choose measures to ensure that contractors working on the plant site use the same environmental standards as our company.

Take customer wishes into account if they comply with the relevant legal regulations and in accordance with our corporate environmental policy.

This environmental policy is binding for employees of all levels and its joint provision is their basic duty.
